

PROAVIO™ S4FR Storage Array Assists Talented Engineer Matthew Testa for Recording & Mixing Efforts

*Testa and the First Mobile RAID-5 Storage Solution Take on Recording Projects for
Heavy Hitter Artists Sean "Diddy" Combs, Pharrell Williams, T-Pain and Rodney Jerkins*

Santa Fe Springs, Calif. (April 2, 2009) - Known as one of New York City's finest Recording/Mix Engineers in the industry, Matthew Testa boasts a roster that involves some of music's elite, such as Grammy super star Sean "Diddy" Combs, Owner of Bad Bay Entertainment, Producer/Artist Mario Winan and Rapper Jay-Z. And since he works with these top-of-the-line artists, he demands top-of-the-line recording tools, such as his newly acquired S4FR Storage Array from PROAVIO™.

Over the years Testa has contributed to three ®Grammy nominated albums, along with over four million album unit sales. Also, in late 2007, Testa began working with Bad Boy Records' newest acts Day 26, Danity Kane, and Donnie Klang also stars of the hit MTV television show "Making The Band" continued to fine-tune his craft by working with artists such as Swiss Beats and Ashanti.

Even most recently Testa secured numerous recording sessions with artists such as T-Pain, Rodney Jerkins, and Pharrell Williams while using his PROAVIO S4FR. As a Recording/Mix Engineer, he deals with countless factors to make the perfect-sounding record, which means he needs speed, replacement and capacity. No matter the application, Testa says the S4FR plays a prominent role in his production process.

"Just by initially looking at the aesthetics you can tell PROAVIO sets itself apart from its competitors. The S4FR has played an essential part of my recordings lately because of its speed, memory and most importantly, its silent operation. I can even track vocals in the same room while the S4FR is running and it works perfectly with my Pro Tools HD Setup - basically it makes my job easier" said Testa. "I definitely have my eye on the S4UF, because of its removable hard drives, which come in handy."

About S4FR

The first mobile RAID-5 storage solution designed for today's digital content creation lifestyle. Featuring a high-quality aluminum rack housing, the Studiorack S4FR incorporates a dual-membrane enclosure design that greatly increases thermal efficiency while reducing disk and fan noise. A dedicated hardware RAID processor reduces system bottle-necks and provides a reduced rebuild window in the event of a disk failure. Four hot-swappable SATA disks allow quick replacement and capacity upgrades on the fly. The Proavio FR series is ideal for systems with limited expansion capabilities such as MacBook Pro, MacBook and Mac Mini. Proavio's new FR line allows users to get the most out any DAW or editing system by offering capacity, performance & redundancy options simply not available in standard FireWire/USB drives.

About ProAvio, U.S.A.

PROAVIO is a developer of high performance storage products & tools designed for professional digital media production. PROAVIO is committed to offering high-quality, cost effective workflow solutions for post, film, and broadcast and digital music production.
