

Grammy Award Winning Mixer/Producer Neal H. Pogue Utilizes PROAVIO™ S4FR Storage Array for Upcoming Recording Sessions

Using the First Mobile RAID-5 Storage Solution, Pogue Sets His Sights on Another “Album of the Year” with the Help of His New State-of-the-Art Tracking Tool

Santa Fe Springs, Calif. (April 8, 2009) – With a Grammy Award for “Album of the Year” under his belt for Outkast’s “SpeakerBoxxx/The Love Below” album, Mixer/Producer Neal H. Pogue of Fulton Yard Unlimited, LLC knows the importance of secured data information. Recently acquiring the S4FR storage array from PROAVIO™, Pogue is now unstoppable knowing his music data is safe.

Having worked with some of the music industry’s most influential artists, such as Stevie Wonder, Earth Wind & Fire, Franz Ferdinand, Queen Latifah, TLC, Talib Kweli and the Transplants, he has seen the trials and tribulations of faulty data storage over the years. No longer is he concerned by these problems thanks to the S4FR and can focus more on the art of recording itself.

“Off the bat what sold me was the S4FR’s drive repair feature – knowing that I don’t have to worry about losing files is a beautiful thing,” said Pogue, as well as, “I finally have a unit where I can access my files from one drive and know that it will repair itself if something goes wrong.”

To give you an even better idea on the caliber of his current work, last year he mixed N.E.R.D.’s album “Seeing Sounds,” mixed pieces from Busta Rhymes’ upcoming release “Back on My B.S.” as well as Common’s “Universal Mind Control.” Pogue has also worked with some breakout artists such as Gym Class Heroes and Chester French.

Since he received his RAID-5 Storage Array, he has already put it to use on some of Michael Bolton’s recent mixes and has also recommended it to production duo, Cool & Dre. Pogue continues to push the envelope with his recent work for artists Mama’s Moonshine and Cherokee - coming to a pair of speakers near you.

About S4FR

The first mobile RAID-5 storage solution designed for today's digital content creation lifestyle. Featuring a high-quality aluminum rack housing, the Studiorack S4FR incorporates a dual-membrane enclosure design that greatly increases thermal efficiency while reducing disk and fan noise. A dedicated hardware RAID processor reduces system bottle-necks and provides a reduced rebuild window in the event of a disk failure. Four hot-swappable SATA disks allow quick replacement and capacity upgrades on the fly. The Proavio FR series is ideal for systems with limited expansion capabilities such as MacBook Pro, MacBook and Mac Mini. Proavio’s new FR line allows users to get the most out any DAW or editing system by offering capacity, performance & redundancy options simply not available in standard FireWire/USB drives.

About ProAvio, U.S.A.

PROAVIO is a developer of high performance storage products & tools designed for professional digital media production. PROAVIO is committed to offering high-quality, cost effective workflow solutions for post, film, and broadcast and digital music production.

Founded in July 2004, PROAVIO™ is quickly becoming the new leader in low-cost, storage solutions for digital media production, and has become the premium brand of choice for many demanding users working in the broadcast and entertainment industries. Headquartered in Southern California, ProAvio has become one of the fastest growing media solution companies in the United States, with expanding global representation through a selected group of authorized dealers and distributors worldwide.
